

Fluid Transfer

Pond Skimmer

Benefits

- Through a two-part telescopic tube it is infinitely height adjustable.
- In addition the float automatically bridges water level differentials up to 160 mm, which can easily occur due to rainfall or strong evaporation.
- The height of the Tower Surface Skimmer can be adjusted simply, and the adjustment does not require tools. The lower part of the tube has a telescopic nut for convenient adjustment. Even adapting to low water levels is possible.
- A smaller tube diameter means less air content and thus prevents the surface skimmer from floating.

Description

The Tower Surface Skimmer powerfully and effectively removes debris that floats on the water surface from the garden pond. Dust, leaves and other pollutants result in pond water becoming saturated with excess external nutrients, it becomes murky, and algae starts to form. A skimmer in the garden pond does not even allow surface pollution to make the water murky.

Skimmer Dimensions

Overall Height	300—800mm
Riser Diameter	80mm
Base Diameter	350mm
Hose Connection	1½ Inch Taper
Filter Basket Volume	1.4 litres 160mm
Water Level Rise & Fall	160mm
